

Appln. No. 10/070,645

Attorney Docket No. 10541-1311

I. Listing of Claims

1-18. Withdrawn.

19. (Currently Amended): An integrated air-intake and circuit assembly for routing electrical signals in an internal combustion engine, the assembly comprising:
an air-intake manifold for drawing fresh air into the internal combustion engine;

a throttle body affixed to the air-intake manifold and in fluid communication therewith for regulating air induction into the internal combustion engine, and wherein the throttle body is substantially comprised of plastic;

a main circuit portion fixable to the throttle body;

a plurality of circuit runner portions extending from the main circuit portion for interconnecting the main circuit portion with a plurality of engine components; and

a heat sink affixed to the throttle body and in contact with ~~at least one of the a~~ main circuit portion and the plurality of circuit runner portions for dissipating heat generated in the circuit portions.

20. (Original): The assembly of claim 19 wherein the air-intake manifold is substantially comprised of plastic.

21. (Cancelled).

22. (Original): The assembly of claim 19 wherein the heat sink is comprised of a thermally conductive material.

Appln. No. 10/070,645

Attorney Docket No. 10541-1311

23. (Original): The assembly of claim 19 wherein the main circuit portion further comprises a flexible substrate for supporting electrical conductors and electrical devices.

24. (Original): The assembly of claim 19 wherein the main circuit portion further comprises a flexible substrate and a rigid substrate for supporting electrical conductors and electrical devices.

25-26. (Cancelled).

27. (Original): The assembly of claim 19 further comprising a plurality of electrical conductors and a plurality of electrical devices wherein the plurality of electrical devices are mounted on the main circuit portion and the plurality of electrical conductors are affixed to the main circuit portion and the plurality of circuit runner portions.

28. (Original): The assembly of claim 19 further comprising a plurality of electrical conductors and a plurality of electrical devices wherein the plurality of electrical devices and the plurality of electrical conductors are mounted throughout the main circuit portion and the plurality of circuit runner portions.

29. (Currently Amended) A circuit for routing electrical signals in an internal combustion engine, the circuit comprising:

a main circuit portion formed in ~~fixable to~~ a throttle body of an air induction system of the internal combustion engine;

Attorney Docket No. 10541-1311

a plurality of circuit runner portions extending from the main circuit portion for interconnecting the main circuit portion with a plurality of engine components; and
a heat sink fixable to the throttle body and in contact with at least one of the main circuit portion and the plurality of circuit runner portions for dissipating heat generated in the circuit portions.

30. (Previously Presented) The circuit of claim 29 wherein the heat sink is comprised of a thermally conductive material.

31. (Previously Presented) The circuit of claim 29 wherein the main circuit portion further comprises a flexible substrate for supporting electrical conductors and electrical devices.

32. (Previously Presented) The circuit of claim 29 wherein the main circuit portion further comprises a flexible substrate and a rigid substrate for supporting electrical conductors and electrical devices.

33-34. (Cancelled).

35. (Previously Presented) The circuit of claim 29 further comprising a plurality of electrical conductors and a plurality of electrical devices wherein the plurality of electrical devices are mounted on the main circuit portion and the plurality of electrical conductors are affixed to the main circuit portion and the plurality of circuit runner portions.

36. (Previously Presented) The circuit of claim 29 further comprising a plurality of electrical conductors and a plurality of electrical devices wherein the plurality of electrical devices and the plurality of electrical conductors are mounted throughout the main circuit portion and the plurality of circuit runner portions.
